Professional Summary

DevOps Engineer with 5+ years of experience in creating and managing cloud-based infrastructures and CI/CD pipelines in AWS and Azure environments. Experienced in deploying containerized applications on various Kubernetes-based platforms, such as Amazon EKS and Azure AKS. Knowledgeable in using Infrastructure as Code tools, such as Terraform, and CI/CD tools, like Jenkins and GitHub Actions, in addition to GitOps using Argo CD. Experienced in using various DevSecOps tools, such as Prometheus, Grafana, Elastic Stack, and Catchpoint, in monitoring and log analysis.

Experience

DevOps and Observability & Monitoring Project (Client-Honeywell) GENPACT	10/2023 to Current Bengaluru, India
- Managed containerized microservices on Amazon EKS across production and QA environments, supporting 12+ services with Docker, Kubernetes and Helm while maintaining application availability, scalability and reliable releases. - Built and maintained Jenkins and GitHub Actions CI/CD pipelines, improving deployment speed by 60%, and implemented Argo CD GitOps workflows for consistent, zero-downtime deployments across environments. - Provisioned AWS infrastructure with Terraform, including VPCs, EKS clusters, node groups and IAM roles, reducing environment provisioning time from several hours to under 30 minutes through reusable IaC workflows. - Tracked SLIs including availability, error rates, latency and application health against defined SLA/SLO targets, identifying reliability risks and using Error Budgets to prioritize remediation. - Handled P1/P2 production incidents and RCA for Kubernetes and application issues by correlating Dynatrace, Catchpoint, Elastic Stack and Kubernetes logs and metrics to identify root causes, restore services and implement preventive actions. - Developed synthetic monitoring tests in Catchpoint using Selenium for critical web applications, business transactions, APIs and SSL health checks, enabling proactive detection of availability and performance issues. - Analyzed application and infrastructure logs across AKS using Elastic Stack, supporting troubleshooting, RCA and faster incident resolution during production operations. - Troubleshoot production and QA Kubernetes clusters, resolving pod failures, scaling issues and 20+ incidents through Jira and ServiceNow while participating in on-call operational support. - Administered Kubernetes Deployments, Services, StatefulSets and Ingress resources alongside AWS ALB Ingress and Route 53 DNS routing to maintain reliable application connectivity and standardized deployments. - Integrated SonarQube and Trivy into CI/CD pipelines, adding automated code-quality analysis and container vulnerability scanning before production releases.	
Cloud Engineer (Client-GE) GENPACT	06/2021 to 10/2023
- Migrated 50+ on-premises VMs and databases to AWS using rehost and replatforming strategies with zero downtime, covering migration assessment, workload validation and post-migration performance optimization. - Automated AWS infrastructure with Terraform across multi-AZ VPCs, EC2, ALB, S3 and RDS, improving infrastructure performance by 35-40% and reducing manual provisioning effort by 50-80%. - Automated Ubuntu EC2 provisioning with Terraform user data scripts for Apache configuration, application bootstrapping and deployment validation, reducing release cycle time by 70%. - Implemented internet-facing Application Load Balancers with listeners, target groups and health checks, achieving 99.9% availability across multiple Availability Zones. - Provisioned and managed S3 and RDS through Terraform, using Git-based IaC workflows to maintain secure, scalable infrastructure while improving consistency and cost control.	

Mnp Technologies

- Managed AWS resources including EC2, EBS, VPC and Security Groups to support development and testing environments.
- Configured IAM users, groups and access policies, applying role-based access controls and security best practices for controlled AWS access.
- Created and executed Terraform configurations to provision AWS resources, gaining practical experience with Infrastructure as Code and repeatable infrastructure deployments.
- Set up a Kubernetes environment and deployed test applications to understand container orchestration, services and application lifecycle management.
- Built Docker images and managed containers for application testing and deployment across development environments.
- Administered Linux user accounts, installed and configured required packages, monitored services and used system troubleshooting commands to diagnose and resolve issues.

Skills

- | | |
|--|---|
| <ul style="list-style-type: none">• Version Control & Configuration Management: Git (GitHub, Bitbucket), Branching Strategy, Repository Management• CI/CD & Build Automation: Azure DevOps Pipelines, GitLab CI/CD, Jenkins Containerization & Orchestration: Docker, Kubernetes, Helm• Cloud Platforms: Azure, AWS (EC2, EKS, ECS, S3, RDS, DynamoDB)• Infrastructure as Code & Configuration Automation: Terraform, CloudFormation, Ansible• Scripting & Configuration Languages: Shell/Bash, YAML, JSON• Programming / Automation: Python Script, Selenium | <ul style="list-style-type: none">• Web & Application Servers: Apache, Nginx, Tomcat• Databases: MySQL, Amazon RDS, DynamoDB• Monitoring & Observability: Dynatrace, Grafana, Catchpoint, ELK• Collaboration & Project Tools: Jira, ServiceNow, Confluence, Agile• Operating Systems: Linux, Windows• AI & Automation: Generative AI, LLMs, Prompt Engineering, AI-Assisted Troubleshooting, Log Analysis, Python Automation |
|--|---|

Certifications

- AWS and DevOps Internship at MNP Technologies
- Completed AWS Solution Architect certification from Edureka
- Completed Terraform certification from Percipio SkillSoft

Achievements

- Promoted from an entry-level position to Consultant based on strong performance, technical growth and demonstrated expertise.
- Received positive client feedback for consistently delivering high-quality work and meeting project requirements.
- Recognized with 'Cheers Points' for dedication, ownership and contributions to key client projects.

Education

Bachelor of Technology (B.Tech): Computer Science and Engineering
Aditya University

05/2019
Surampalam
