Professional Summary

DevOps Engineer with 5+ years of experience in creating and managing cloud-based infrastructures and CI/CD pipelines in AWS and Azure environments. Experienced in deploying containerized applications on various Kubernetes-based platforms, such as Amazon EKS and Azure AKS. Knowledgeable in using Infrastructure as Code tools, such as Terraform, and CI/CD tools, like Jenkins and GitHub Actions, in addition to GitOps using Argo CD. Experienced in using various DevSecOps tools, such as Prometheus, Grafana, Elastic Stack, and Catchpoint, in monitoring and log analysis.

Experience

DevOps and Observability & Monitoring Project (Client-Honeywell) GENPACT	10/2023 to Current Bengaluru, India
- Managed containerized deployments of microservices applications using AWS EKS, which served 12+ services in production and QA environments, thereby ensuring consistent releases using Docker, Kubernetes manifests, and Helm charts. - Developed infrastructure provisioning for AWS using Terraform, which enabled the creation of VPCs, EKS clusters, node groups, and AWS IAM roles, thereby reducing the time taken for environment provisioning from multiple hours to less than 30 minutes. - Developed and maintained Continuous Integration/Continuous Deployment (CI/CD) pipelines using Jenkins and GitHub Actions, which improved the overall speed of deployments by 60%. - Developed and implemented GitOps-based application deployments using Argo CD, which ensured zero-downtime application deployments across multiple environments. - Configured AWS Application Load Balancer (ALB) Ingress Controllers and Route 53 for DNS routing, which enabled the exposure of Kubernetes applications using secure endpoints and custom domains. - Developed and maintained Helm charts and Kubernetes resources (Deployments, Services, StatefulSets, Ingress), which ensured the standardization of application deployments and environment configurations. - Implemented DevSecOps security checks in the CI/CD pipeline, which included SonarQube for code quality checks and Trivy for image vulnerability checks prior to container deployments. - Developed synthetic monitoring using Selenium in Catchpoint, which involved the onboarding of multiple web applications and monitoring of transactions, APIs, and SSL health for critical applications. - Managed log monitoring using the Elastic Stack running in Azure Kubernetes Service (AKS), which enabled faster root cause analysis of application and infrastructure issues. - Supported Linux-based HPC (High Performance Computing) and Grid computing environments, including compute-node administration, workload scheduling, infrastructure automation, monitoring, troubleshooting, and performance optimization. - Served multiple Kubernetes clusters in production and QA running in Azure Kubernetes Service (AKS), which involved troubleshooting pod failures, replica scaling issues, and resolution of 20+ incidents in the environment using Jira and ServiceNow.	
Cloud Migration Project (Client-GE) GENPACT	06/2021 to 10/2023
- Implemented fully functional AWS infrastructure architecture using Terraform (IaC), including VPC (multi-AZ subnets, route tables, IGW, and security groups), EC2, ALB, S3, and RDS, which resulted in a 35-40% boost in infrastructure performance and a 50-80% reduction in manual provisioning time. - Developed and executed zero-touch EC2 (Ubuntu) infrastructure using Terraform user data scripts, which facilitated application-level infrastructure bootstrapping (Apache configuration, deployment verification), resulting in a 70% reduction in release cycles.	

- Migrated over 50 on-premises VMs and databases to AWS using rehost and replatforming strategies with zero downtime, including migration analysis, workload validation, and performance optimization after migration.
- Set up and managed internet-facing Application Load Balancer (ALB) with listeners, target groups, and health checks to provide 99.9% availability and improved fault tolerance across multiple AZs.
- Managed S3 storage and RDS provisioning using Terraform, ensuring a secure architecture, scalable design, and optimized cost control using structured IaC workflows and Git-based version control.

Internship

10/2020 to 03/2021

MNP TECHNOLOGIES

- Managed AWS resources EC2, EBS, VPC, and Security Groups for development and testing.
- Set up IAM users and groups, built policies, and handled secure access controls.
- On the Linux side, took care of user management, installed packages, checked services, and ran troubleshooting commands when things acted up.
- Built Docker images and ran containers to test and deploy applications.
- Set up a basic Kubernetes environment and deployed some test apps.
- Wrote and ran simple Terraform scripts to spin up AWS resources and get hands-on with Infrastructure as Code.

Skills

Version Control & Configuration Management:

Git (GitHub, Bitbucket), Branching Strategy, Repository Management

CI/CD & Build Automation:

Azure DevOps Pipelines, GitHub Action, CI/CD, Jenkins

Containerization & Orchestration:

Docker, Kubernetes, Helm

Cloud Platforms:

Azure, AWS (EC2, EKS, ECS, S3, RDS, DynamoDB)

Infrastructure as Code & Configuration

Automation:

Terraform, CloudFormation, Ansible

Scripting & Configuration Languages:

Shell/Bash, YAML, JSON

Programming / Automation:

Java, Python Script, Selenium

Web & Application Servers:

Apache, Nginx, Tomcat

Databases:

MySQL, Amazon RDS, DynamoDB

Monitoring & Observability:

Dynatrace, Grafana Prometheus, Catchpoint, ELK

Collaboration & Project Tools:

Jira, ServiceNow, Confluence, Agile

Operating Systems:

Linux, Windows

Certifications

- AWS and DevOps Internship at MNP Technologies
- Completed AWS Solution Architect certification from Edureka
- Completed Terraform certification from Percipio SkillSoft

Custom Section

- Promoted from an entry-level position to consultant based on performance and expertise.
- Received positive client feedback for consistently delivering high-quality work.
- Awarded 'Cheers Points' for dedication and exceptional contribution to client projects.

Education

Bachelor of Technology (B.Tech): Computer Science and Engineering
Aditya University

05/2019
